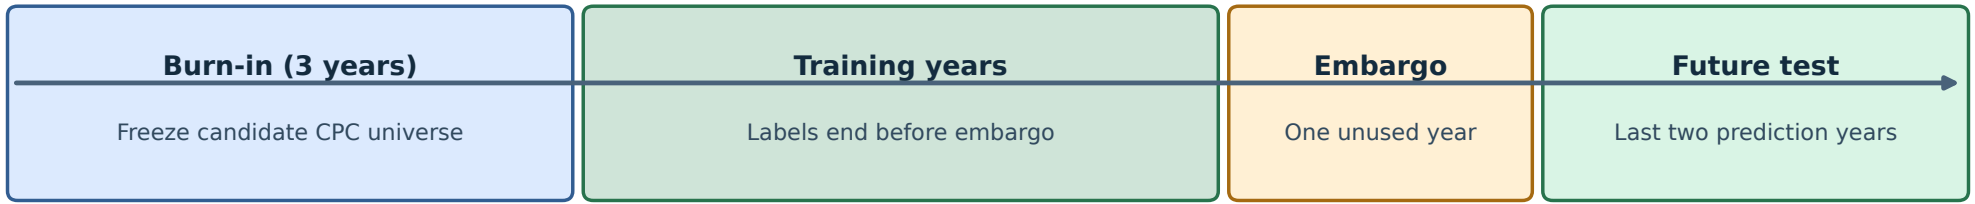
Leakage-aware temporal evaluation protocol

Predict from information available at time t; score outcomes only after the cutoff and embargo.



A. Fit

Imputation and scaling

Model parameters

Historical graph rates

B. Compare

M1 logistic baseline

M2 tabular random forest

M3 graph-feature RF

C. Report

Average precision, ROC-AUC

Balanced accuracy, Brier

Firm-clustered intervals

This diagram defines the protocol; it is not a report of measured model performance.
