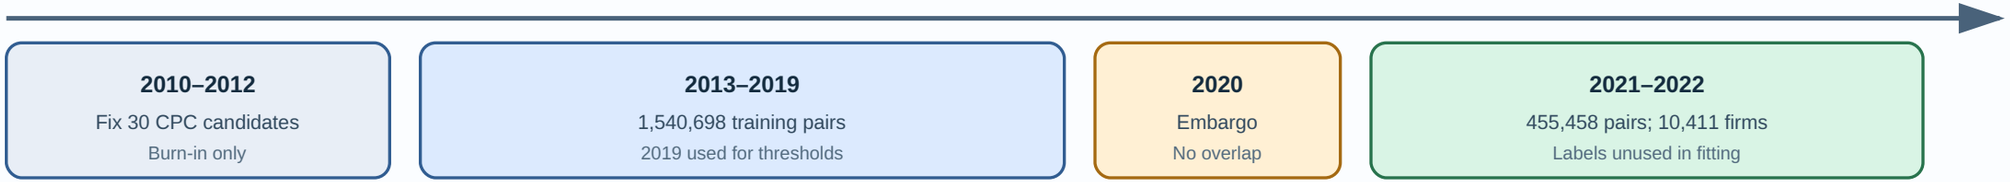
Grant-year protocol: features at t from data ≤ t; score first entry in t+1



M1 logistic and M2 forest use activity features only. M3 adds common-neighbor, peer-adoption, and degree features. Average precision is reported against the 1.11% base rate, with a firm-cluster 95% interval for M3 − M2.

This figure documents the executed protocol. Measured scores are in Table 2. A second chronological cutoff was not run.

Demo-mode metrics are not used.
